DIMENSIONS

The air ducts have a standard length of 3000 mm and width and height as listed below:

- 735 mm wide x 735 mm high
- 735 mm wide x 435 mm high
- 1335 mm wide x 735 mm high
- 1335 mm wide x 435 mm high

Other dimensions on request

THE ADVANTAGES AT A GLANCE

Applicable in all kinds of businesses

All the advantages offered by DIMKISOL air ducts are easily summed up in one word: cost-efficient. We're sure you'll need no convincing that this is the most important factor. Not to mention the ease of maintenance and all the possibilities these air ducts offer.

Installation and flexibility

The system is designed so that installation is extremely simple, eliminating the need for specialised technicians. The tiles can also be moved easily when the space is adapted to suit the need for ventilation, cooling or heating. For an area where you do not want to use these functions, fit closed tiles. For installing lighting, use the special tiles with a cut-out.

Maintenance and cleaning

Firstly, the tiles used need less maintenance than other materials. The tiles can easily be removed from the air ducts and then put back later. Cleaning is just a matter of wiping with a damp cloth. This simplifies (preventive) maintenance and eliminates the need for a cleaning company.

DIMKISOL ... THE RIGHT CHOICE!

In summary

DIMKISOL air ducts ensure an ideal living climate, without draughts or condensation. Installation is simple and zones can easily be converted. Incorporating lighting is no problem and there is the option of improving acoustics. Preventive inspection and cleaning can be done in-house with no difficulty. The ducts also have a very long lifespan. In short, DIMKISOL air ducts are the cheapest short and long-term solution!

DIMKISOL AIR DUCTS

A cost-saving intelligent system for all-round use

DIMKISOL metal air ducts were created by the ingenious use of one of our top products, Polyval tiles, which have been successfully proving their worth in a variety of industries and sectors for almost 50 years.

These metal tiles offer ventilating (and optionally acoustic) properties that ensure draught-free space heating or cooling. The use of these tiles for wall and ceiling systems has provided the solution for many companies for many decades

A better internal climate

These unique qualities are an inherent feature of our metal air ducts. They can be used for cooling or heating, as well as for ventilation. And the ducts offer even more: they can be fitted with an inlay mat for better acoustics, or can even be used for recessed lighting.

The various types of 'tiles' available for this purpose offer countless possibilities!

Browse the brochure. We'd be happy to list all the advantages, or convince you on our website.
